

# CV EVALUATION REPORT

**DOCUMENT NAME:** John\_Doe\_Resume.pdf

**TARGET ROLE:** Senior Backend Engineer

## OVERALL CV CALIBER

**82 / 100**

Competitive CV

### Impact

75%

### Presentation

85%

### Experience Quality

90%

### Keyword Fit

78%

## Executive AI Evaluation

This is a strong CV that highlights key achievements. It aligns well with the software engineer profile but requires slight optimizations in keyword density.

## ATS Keyword Gap Finder (Match Score: 57%)

*Note: Missing keywords represent crucial industry competencies expected in candidate profiles for this role.*

### Matched Competencies

Python, FastAPI, SQLite, API Design

### Missing Critical Keywords

Docker, CI/CD, Unit Testing

## Section-by-Section Critique

### Summary / Profile Objective

Clean and concise, but could mention years of experience.

### Professional Work History

Detailed, although some bullets are slightly weak in result description.

### Projects, Education & Technical Skills

Skills section is well organized. Project section could use web links.

## Key Feedback Highlights

### KEY STRENGTHS

#### [EXPERIENCE] Strong technical background in Python and FastAPI

The work history clearly demonstrates the implementation of backend services using FastAPI and clean architectures.

### AREAS FOR IMPROVEMENT

#### [QUANTIFICATION] Quantify achievements using metrics

Several bullet points describe tasks without presenting the results or business impact. Try to use percentages or numbers.

## STAR Bullet Point Optimizer

---

*Optimized sentences below are designed to highlight impact using action verbs and STAR criteria.*

**Original:** "Worked on python code and fixed bugs."

**Optimized:** "Refactored critical Python backend codebase, reducing runtime latency by 15% and resolving 40+ legacy bugs."

**Rationale:** Uses active verbs, quantifies impact with a metric, and clearly defines scope of work.
